

Chanhee Lee

📍 Seoul, Republic of Korea ✉ leechanhye3722@gmail.com 🌐 iontail.github.io

Research Interest

Video Summarization, Representation Learning, and Generative Modeling.

Education

Sungkyunkwan University, *BS in Applied Artificial Intelligence* Mar. 2021 – Aug. 2026
 ◦ GPA: 4.28/4.5 (Overall), 4.39/4.5 (Major)

Experience

Seoul National University, *Visual Information Processing Laboratory (VIP)* [🔗](#) May 2026 – Present
 - *Research Intern* (Advisor: Joonseok Lee / Location: Seoul, Republic of Korea)

- Conduct research on Video Summarization

Sungkyunkwan University, *Efficient Learning Laboratory* [🔗](#) Sep. 2025 – Dec. 2025
 - *Research Intern* (Advisor: Hankook Lee / Location: Suwon, Republic of Korea)

- Received intensive individual faculty mentorship in analyzing papers, implementing methods, and presenting research clearly.

Projects

- Code and additional details for all projects are available on <https://iontail.github.io> [🔗](#).
- * Indicates projects or research in which I have served as a **main contributor**.

***Versum: Controllable Video Summarization via Latent-Conditional Distributions**, *Research in VIP Lab*. Mar. 2026 – Present

- Developing a latent-conditioned probabilistic model for preference-aligned video summarization while preserving within-preference diversity.
- Targeting submission to CVPR 2027 or ICML 2027.

***Beyond Highlight Detection: Most-Replayed Driven Multimodal Analysis of Korean YouTube Videos for Highlight Editing Guidance**, *Course (Capstone) Project* Mar. 2026 – Jun. 2026

- Research on multimodal characteristics of most-replayed segments in Korean YouTube videos, building a pipeline to analyze visual, audio, and textual features and provide category-specific highlight editing guidance.

***Well Begun Is Half Solved: Future-Aware Route Optimization for Long Narrative Question Answering**, *Course Project* May 2026 – Jun. 2026

- Research on agent-based question answering over long narratives, proposing an inference-time framework that anticipates answerability to select an evidence retrieval route before generating an answer.

***Rethinking Diffusion-Based Augmentation: Why Single Prompt Fails**, *Course Project* Oct. 2025 – Nov. 2025

- Research on the limitations of single-prompt diffusion-based augmentation for image classification, investigating the factors underlying its impact on model generalization.

***N-TIDE: Debiasing Unimodal Vision Models via Neutral Text Inversion with CLIP**, *Course Project* May. 2025 – Jun. 2025

- Research on mitigating social bias in unimodal vision models by leveraging CLIP-based neutral-text inversion inspired by the null-text inversion and knowledge distillation to train a debiased image-only classifier.

***BRNet: a Bio-Receptor Networks for Object Detection with Zero-Shot Domain Adaptation**, *Undergraduate Research Program* Mar. 2025 – Jun. 2025

- An URP aimed at developing an object detector that performs reliably under both low-light and well-lit conditions.
- Designed and evaluated the proposed architecture, and documented the methodology and experimental results in a research paper-style report.

***CoReaP: Collaborative Reconstruction with assitive priors**, *AI Research Competition* Jan. 2025 – Mar. 2025

- A research competition project aimed at improving image inpainting.
- Designed an inpainting architecture combining deformable convolution tokenization and two-stream frequency learning.

Digital Therapeutics(DTx) Research for Preventing Relapse in Online Gambling Addiction, *Course Project* Sep 2024 - Dec 2024

- A course project developing a digital therapeutics service prototype for online gambling relapse prevention.
- Trained a relapse detection model and implemented an LLM- and RAG-based pipeline to classify patients by stage based on the detection results.

Extracurricular Activities

brAIIn (Sungkyunkwan University AI Society) Sep. 2024 – Present

- Reviewed and discussed papers on computer vision, representation learning, and generative models.
- Presented research papers in advanced seminars.
- Served on the organizing team

Honors & Awards

Dacon 2025 Bias-A-Thon: Bias Responding Challenge, *AI Competition* Jun. 2025

- Developed prompt and retrieval-augmented generation (RAG) methods to generate fair and neutral responses under biased scenarios as part of an academic challenge. (Top 4)

Sungkyunkwan University brAIIn Research Program (BRP) Award, *AI Research competition* Feb. 2025

- Awarded Top 2 for *CoReaP: Collaborative Reconstruction with Assistive Priors*, an image inpainting project (see Projects).

Scholarship

Academic Excellence Scholarship for 2026 Spring Semester Feb. 2025

Academic Excellence Scholarship for 2024 Fall Semester Jun. 2026

Certifications & Test Scores

Test of English Proficiency developed by Seoul National University(TEPS) Feb. 2026

- Score: 403/600

Advanced Data Analytics Semi-Professional(ADsP) Mar. 2024

- Score: 86/100
